1. Claims 75-81, 83-92, 94-104, 106-115, and 117-123 are allowable over prior art references because related references do not disclose an apparatus for down-converting a signal including a capacitor, transistor, resonant structure and a control signal coupled to the gate of the transistor, wherein a value of capacitance for the capacitor is selected based on a frequency of energy transfer pulses, an aperture duration of the transistor, and a resistor value.
